

Supplies: you will need a pencil, level, template, 2 screws (supplied), 123 Lock-Down Latch, and a power screwdriver.

https://youtu.be/-dK7 K00wjA

Line up and level the template.

- With a level, draw a line with the pencil where you plan to install the 123 Lock-Down Latch.
- With the door closed, insert the template between the door and the door jamb, until it stops at the inner aspect of the door frame. Make sure it is lined up with the level line. At least part of the light gray area at the end of the template must be visible. If it is completely covered by the door jamb or weather stripping, pull the template out until you can see the gray area.

Double-check that there is proper clearance for the latch.

• Before marking the pilot holes, line the 123 Lock-Down Latch up to the template and make sure that the bumper is in the extended position, it is covered (at least partially) by the doors jamb and when the bumper is in the retracted position, it is clear and free. Diagram #2 shows the latch in the retracted position and in diagram #3, it is in the extended position.

Attach the 123 Lock-Down Latch.

- Use a pencil to mark the two pilot holes for the 1/8 inch metal screws.
- Remove the template.
- Use a drill and secure the latch to the door.
- Double check that the bumpers keep the door from locking when fully extended and allow the door to close when fully retracted.

Door Closed be sure template is level gray must be partially visible slide template to until it hits the door frame

example for left-opening door

for left opening doors, for right opening **Template** line this end up with doors, line this end up inner door frame with inner door frame at least a part of at least a part of this shaded area this shaded area must be visible must be visible pilot holes for screws when marking the when marking the pilot holes pilot holes 123 Lock-Down Latch

Contact the 123 Lock-Down Latch company if you have any installation issues (cory@lockdownlatch.com).
